Sinological extension

Sinologists working on Chinese and other Sino-Tibetan languages often use some characters originally adapted by Karlgren from the Swedish Landsmålsalfabetet for the representation of apical vowels. 027F and 0285 are derived from straight and tailed versions of the italic (dotless) long i in that notation, but over time took on their own identity. The character names are misleading.

The tail on this character ultimately derived from the hooked terminal stroke of an italic (dotless) long i, but its use for an apical retroflex vowel has led to reanalysis as a retroflex hook.
